

한 입 크기로 잘라먹는 타입스크립트

타입은 집합이다

number Type

20(number Literal Type)

20

```
let num: 20 = 20;
```

number Type

number literal Type

슈퍼타입(부모타입)

number Type

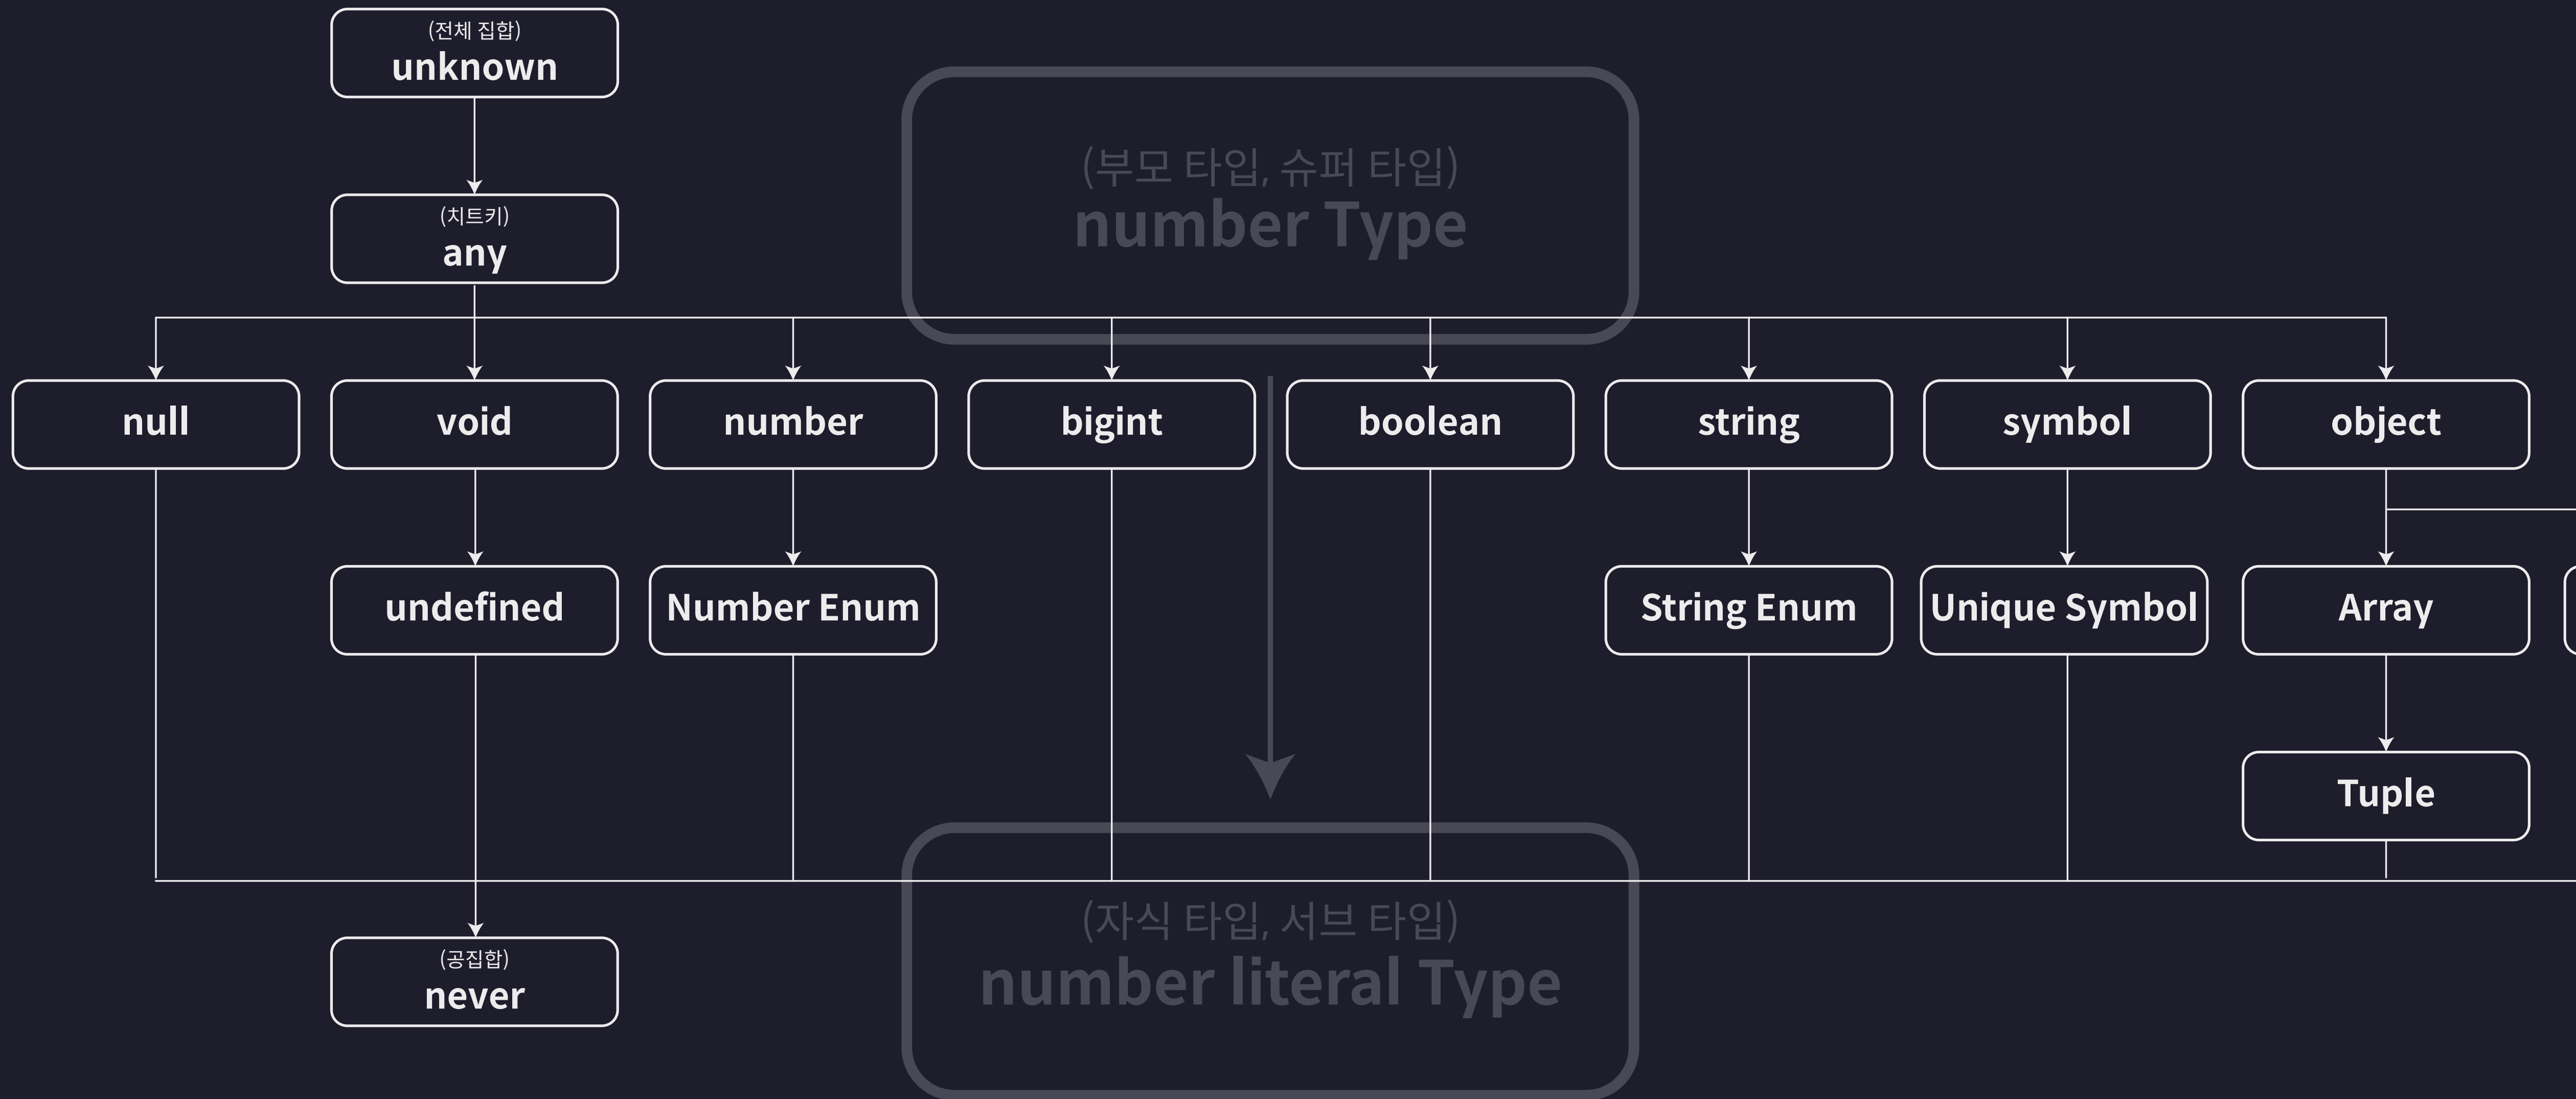

서브타입(자식타입)

number literal Type

(부모 타입, 슈퍼 타입)
number Type

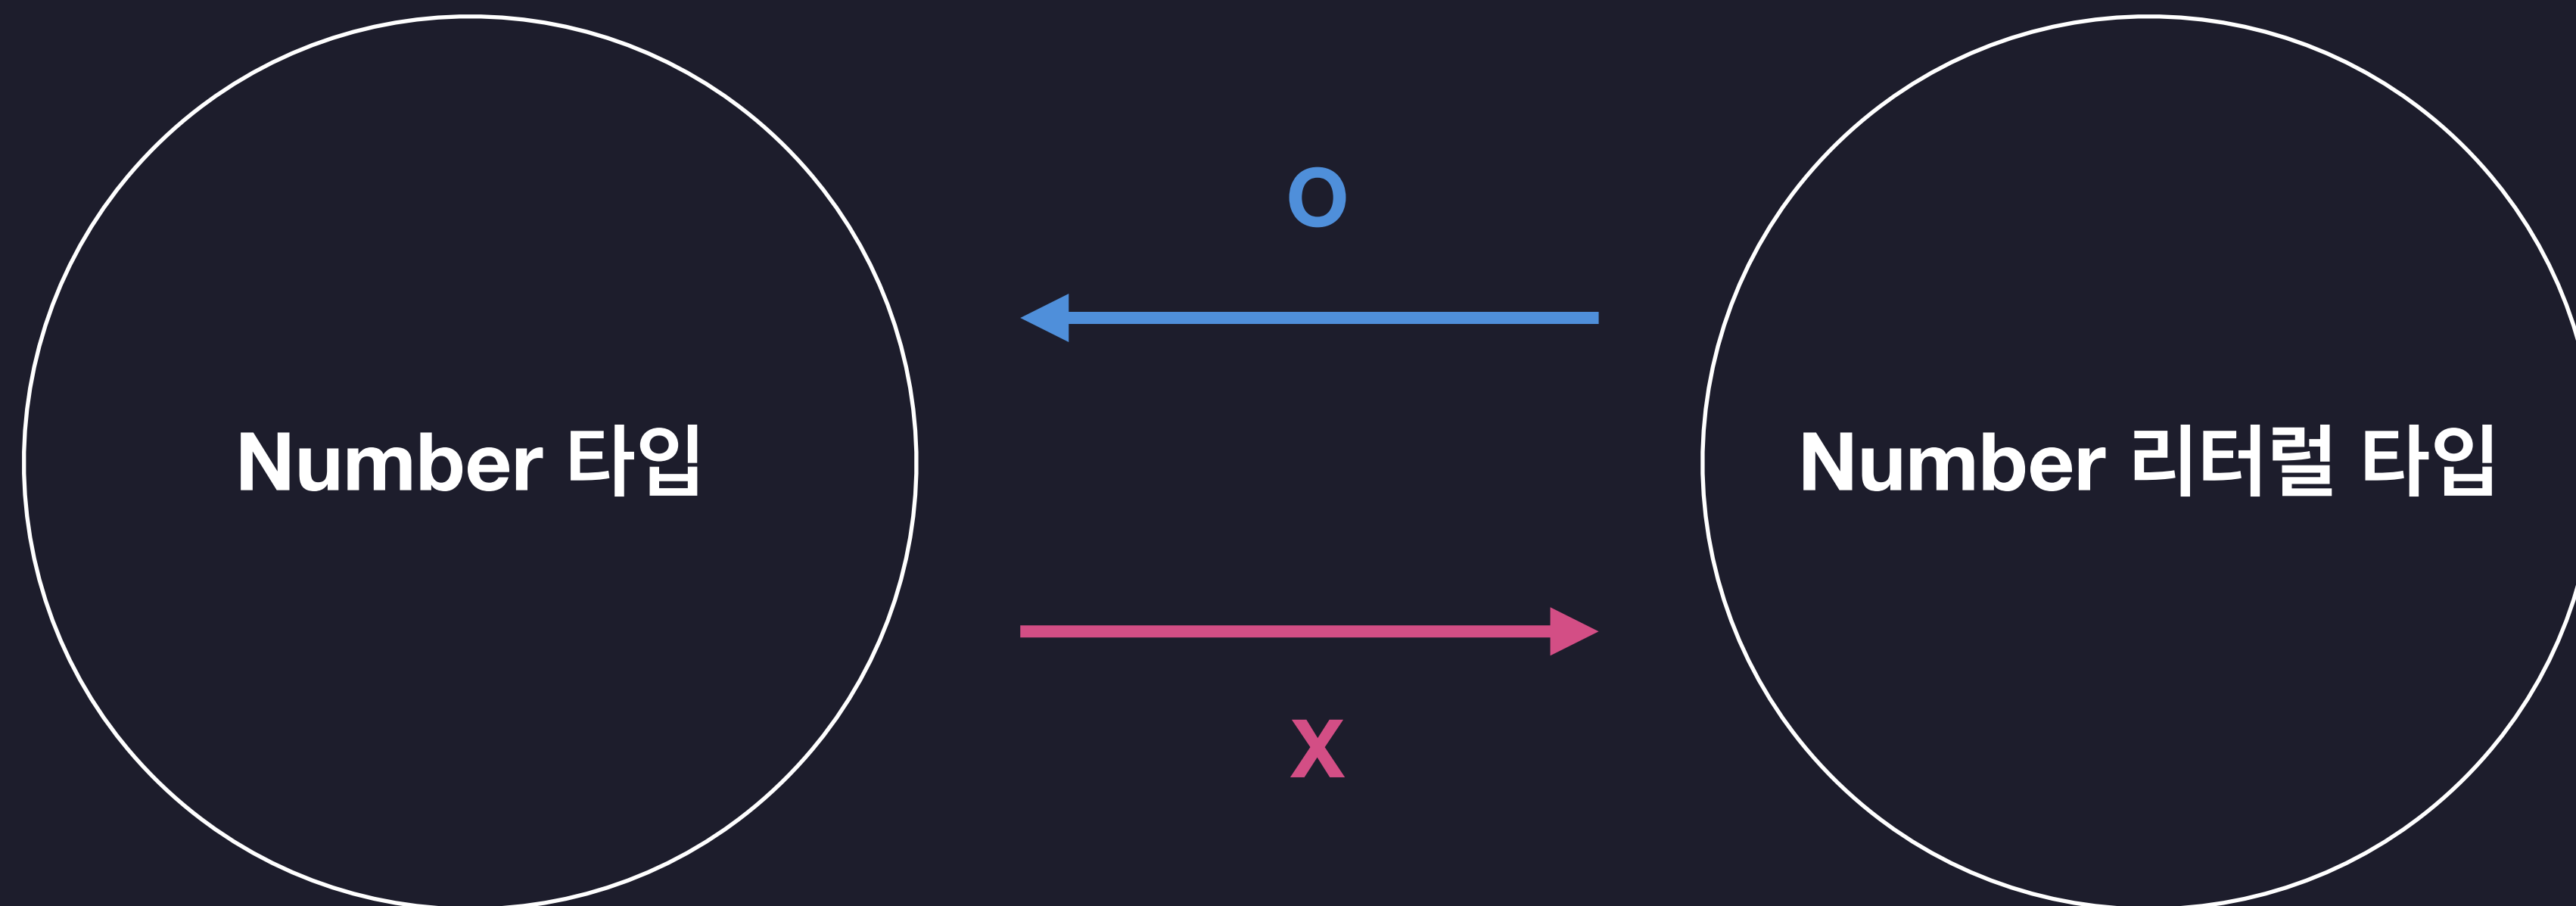

(자식 타입, 서브 타입)
number literal Type

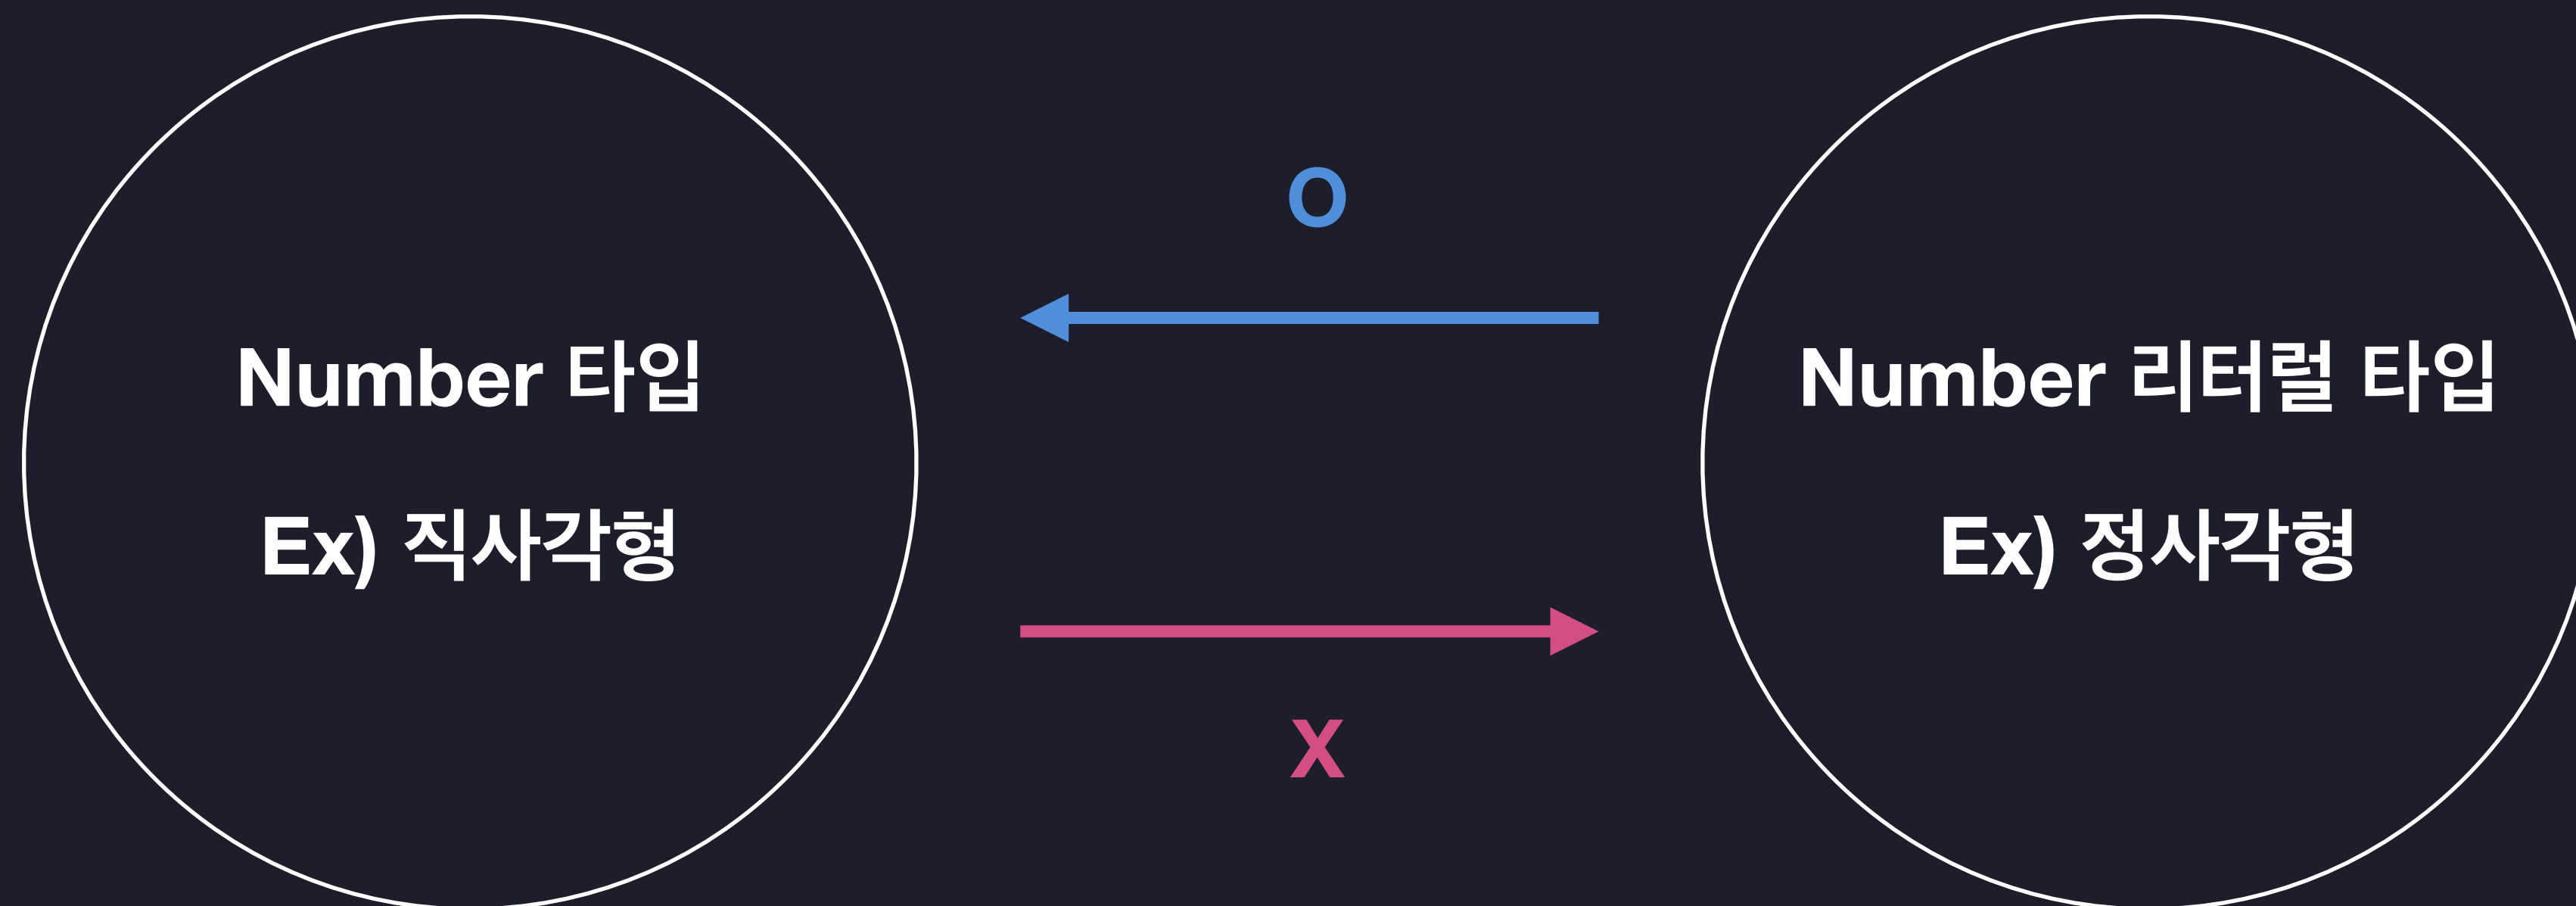

타입 호환성

어떤 타입을 다른 타입으로 취급해도 괜찮은지 판단하는 것

타입 호환성

어떤 타입을 다른 타입으로 취급해도 괜찮은지 판단하는 것

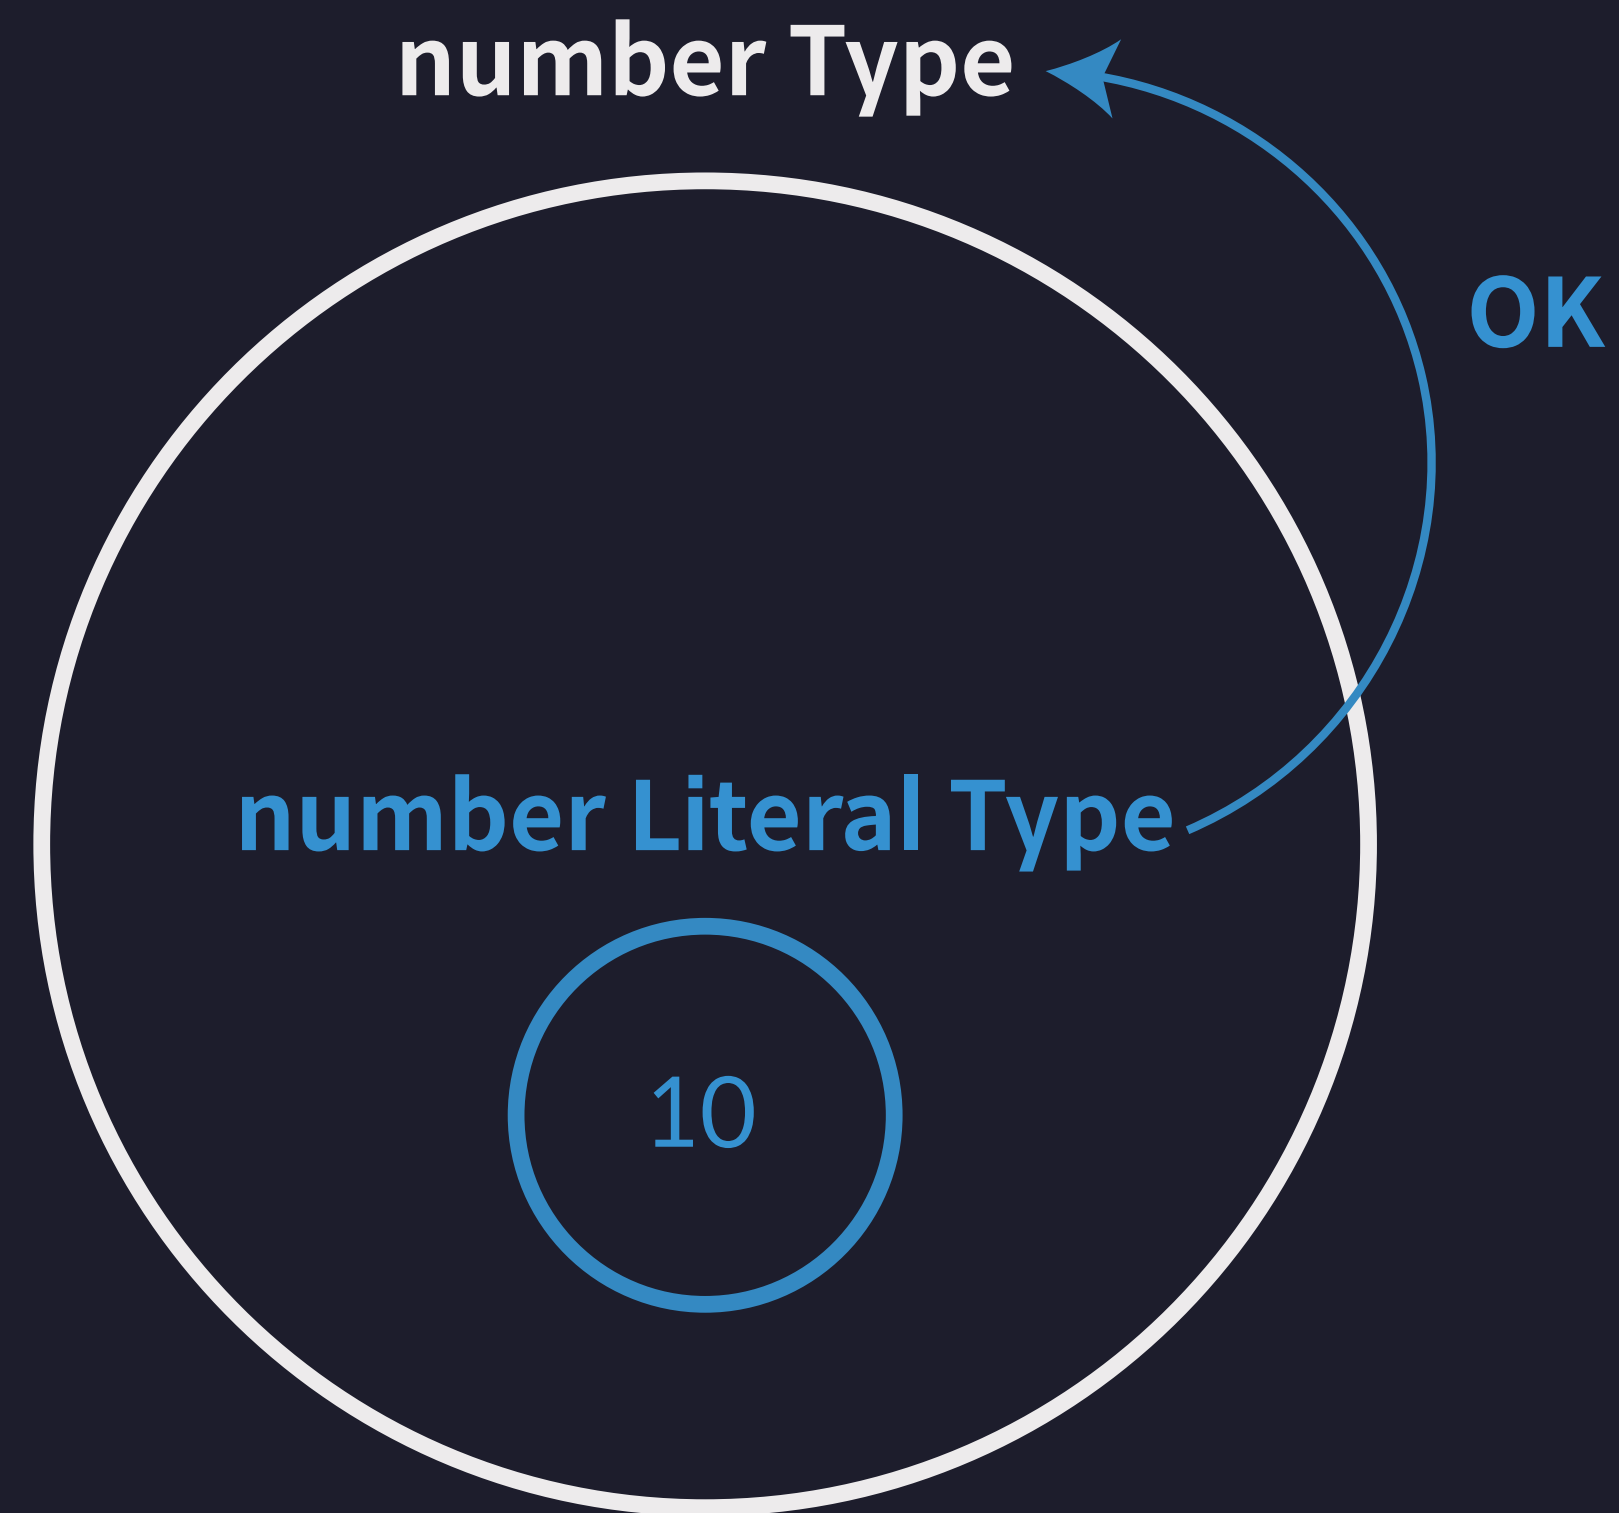

타입 호환성

```
let num1: number = 10;  
let num2: 10 = 10;  
  
num1 = num2;
```

타입 호환성

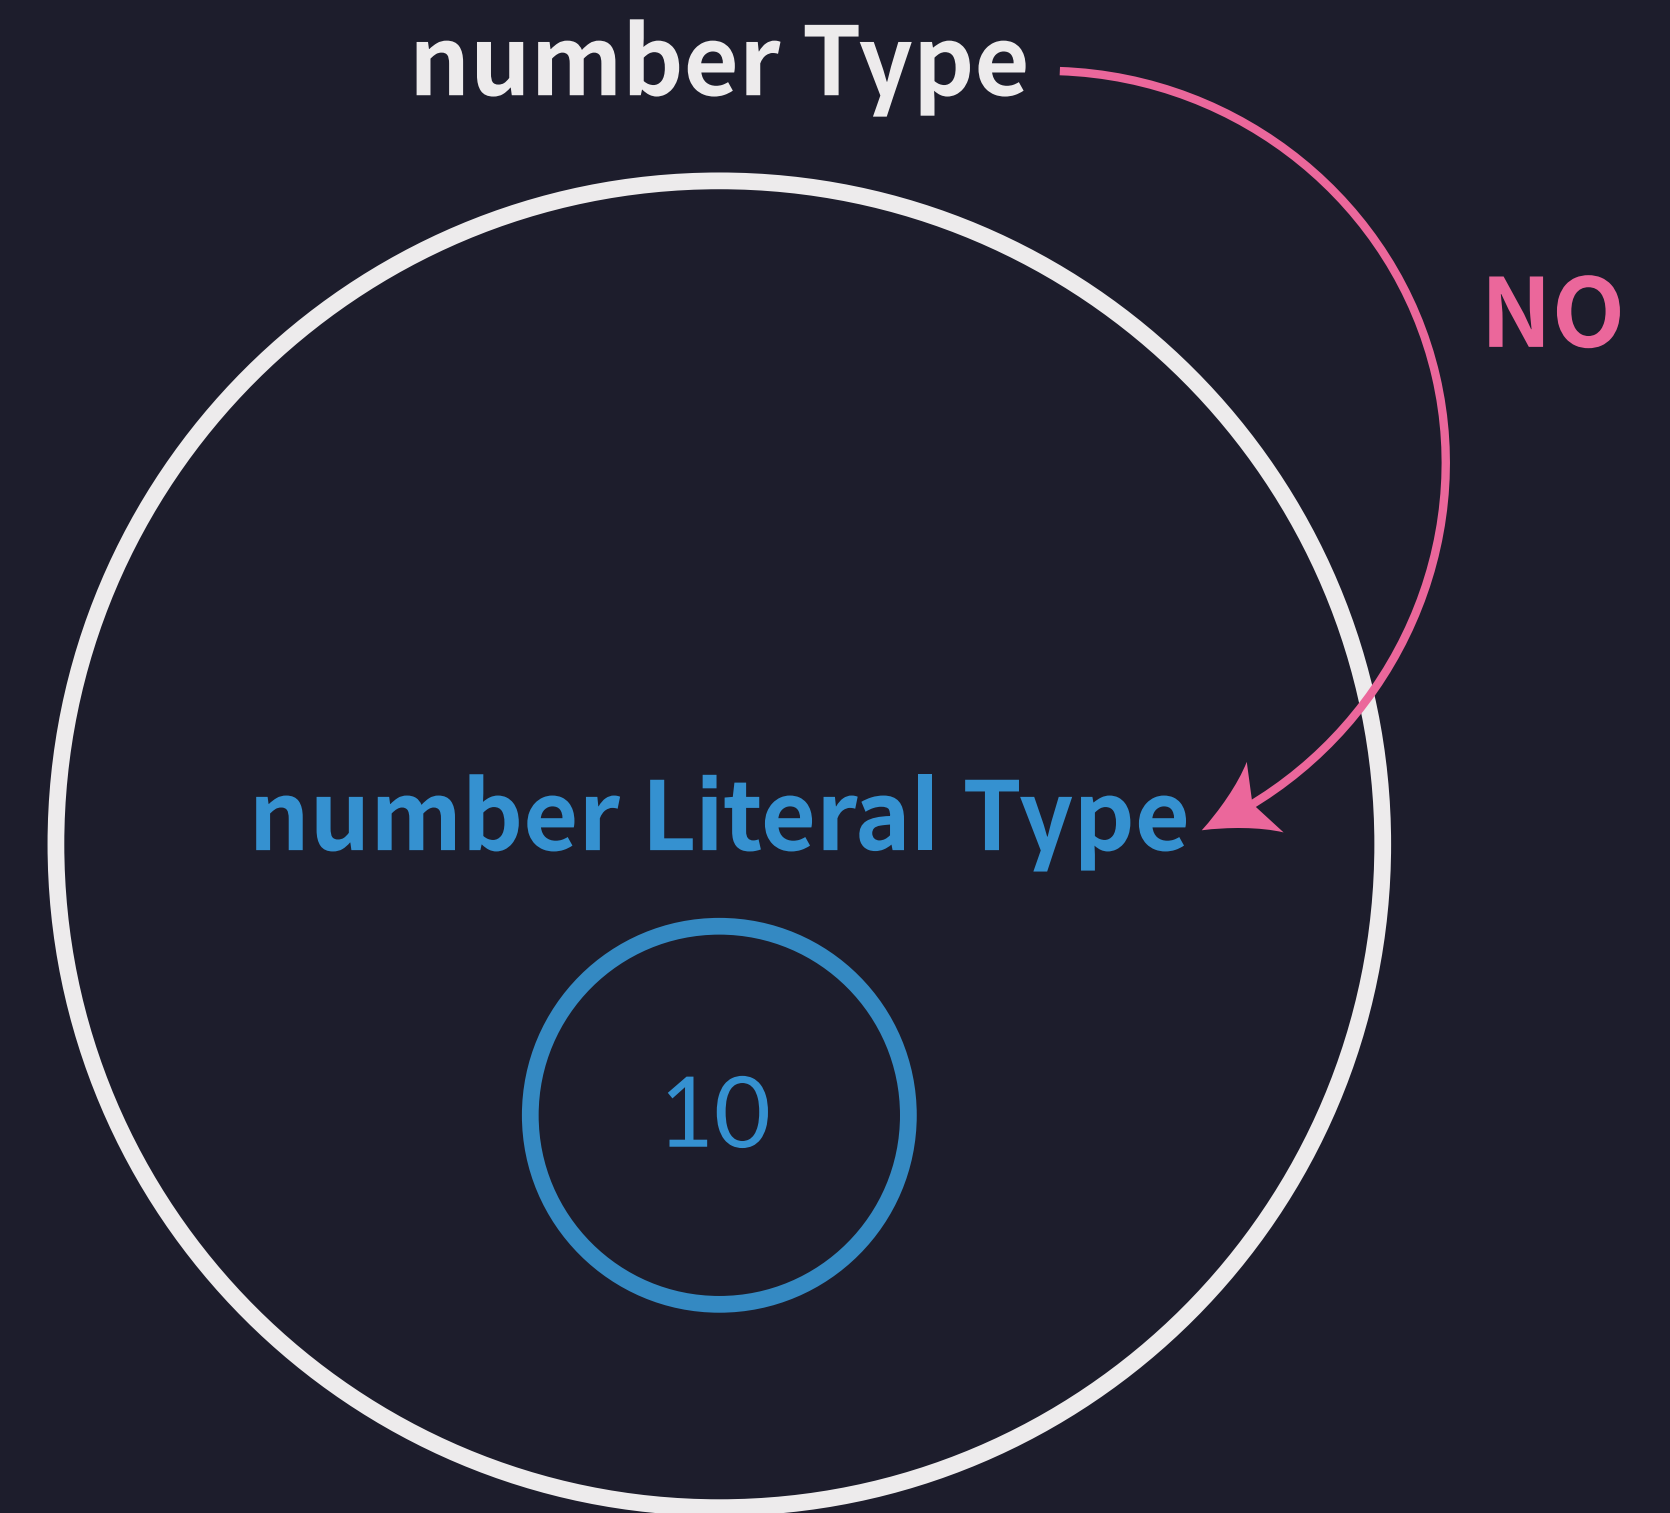

```
let num1: number = 10;  
let num2: 10 = 10;
```

```
num2 = num1;      'number'
```

```
let num1: number = 10;  
let num2: 10 = 10;
```

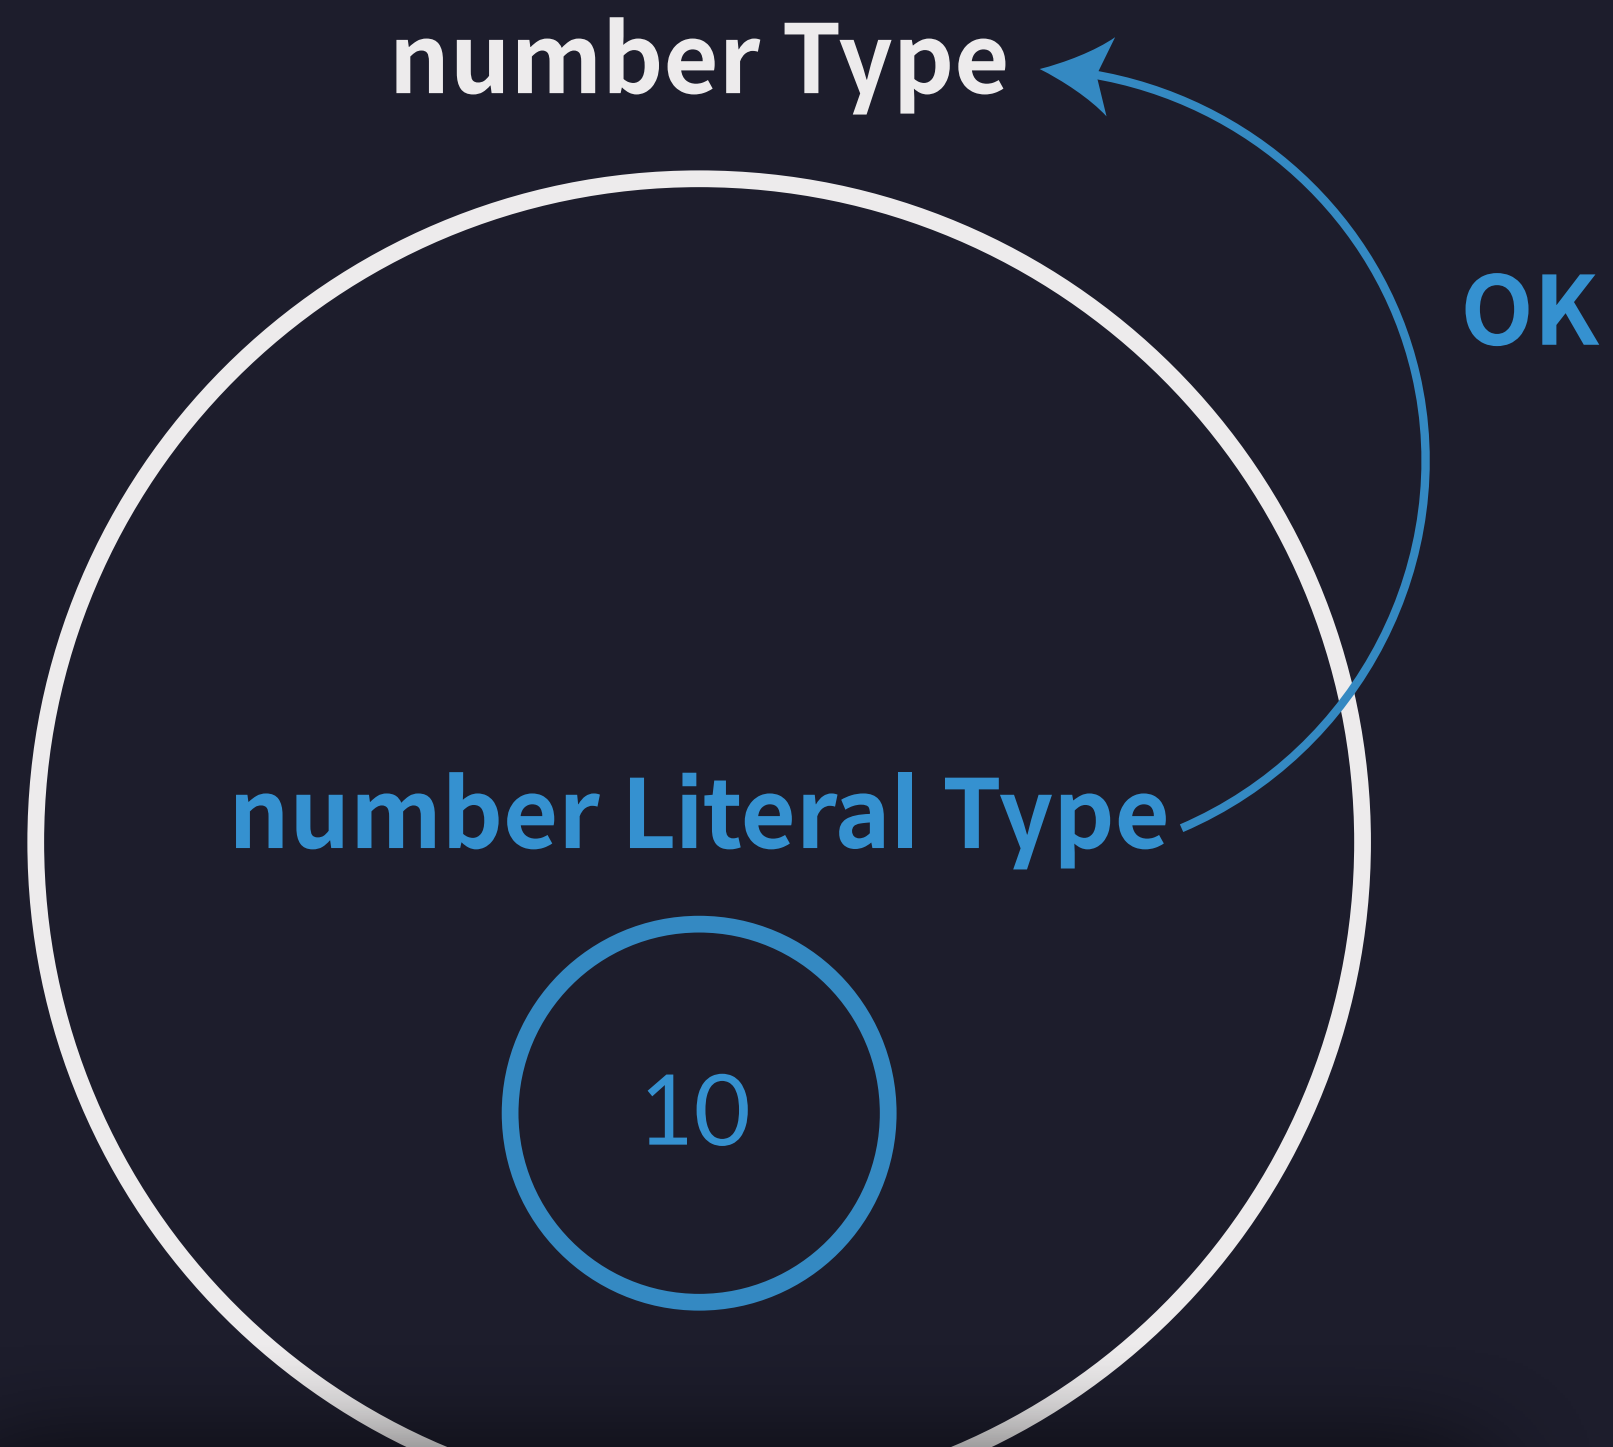

```
num1 = num2;
```

```
let num1: number = 10;  
let num2: 10 = 10;
```

```
num2 = num1; 'number'
```

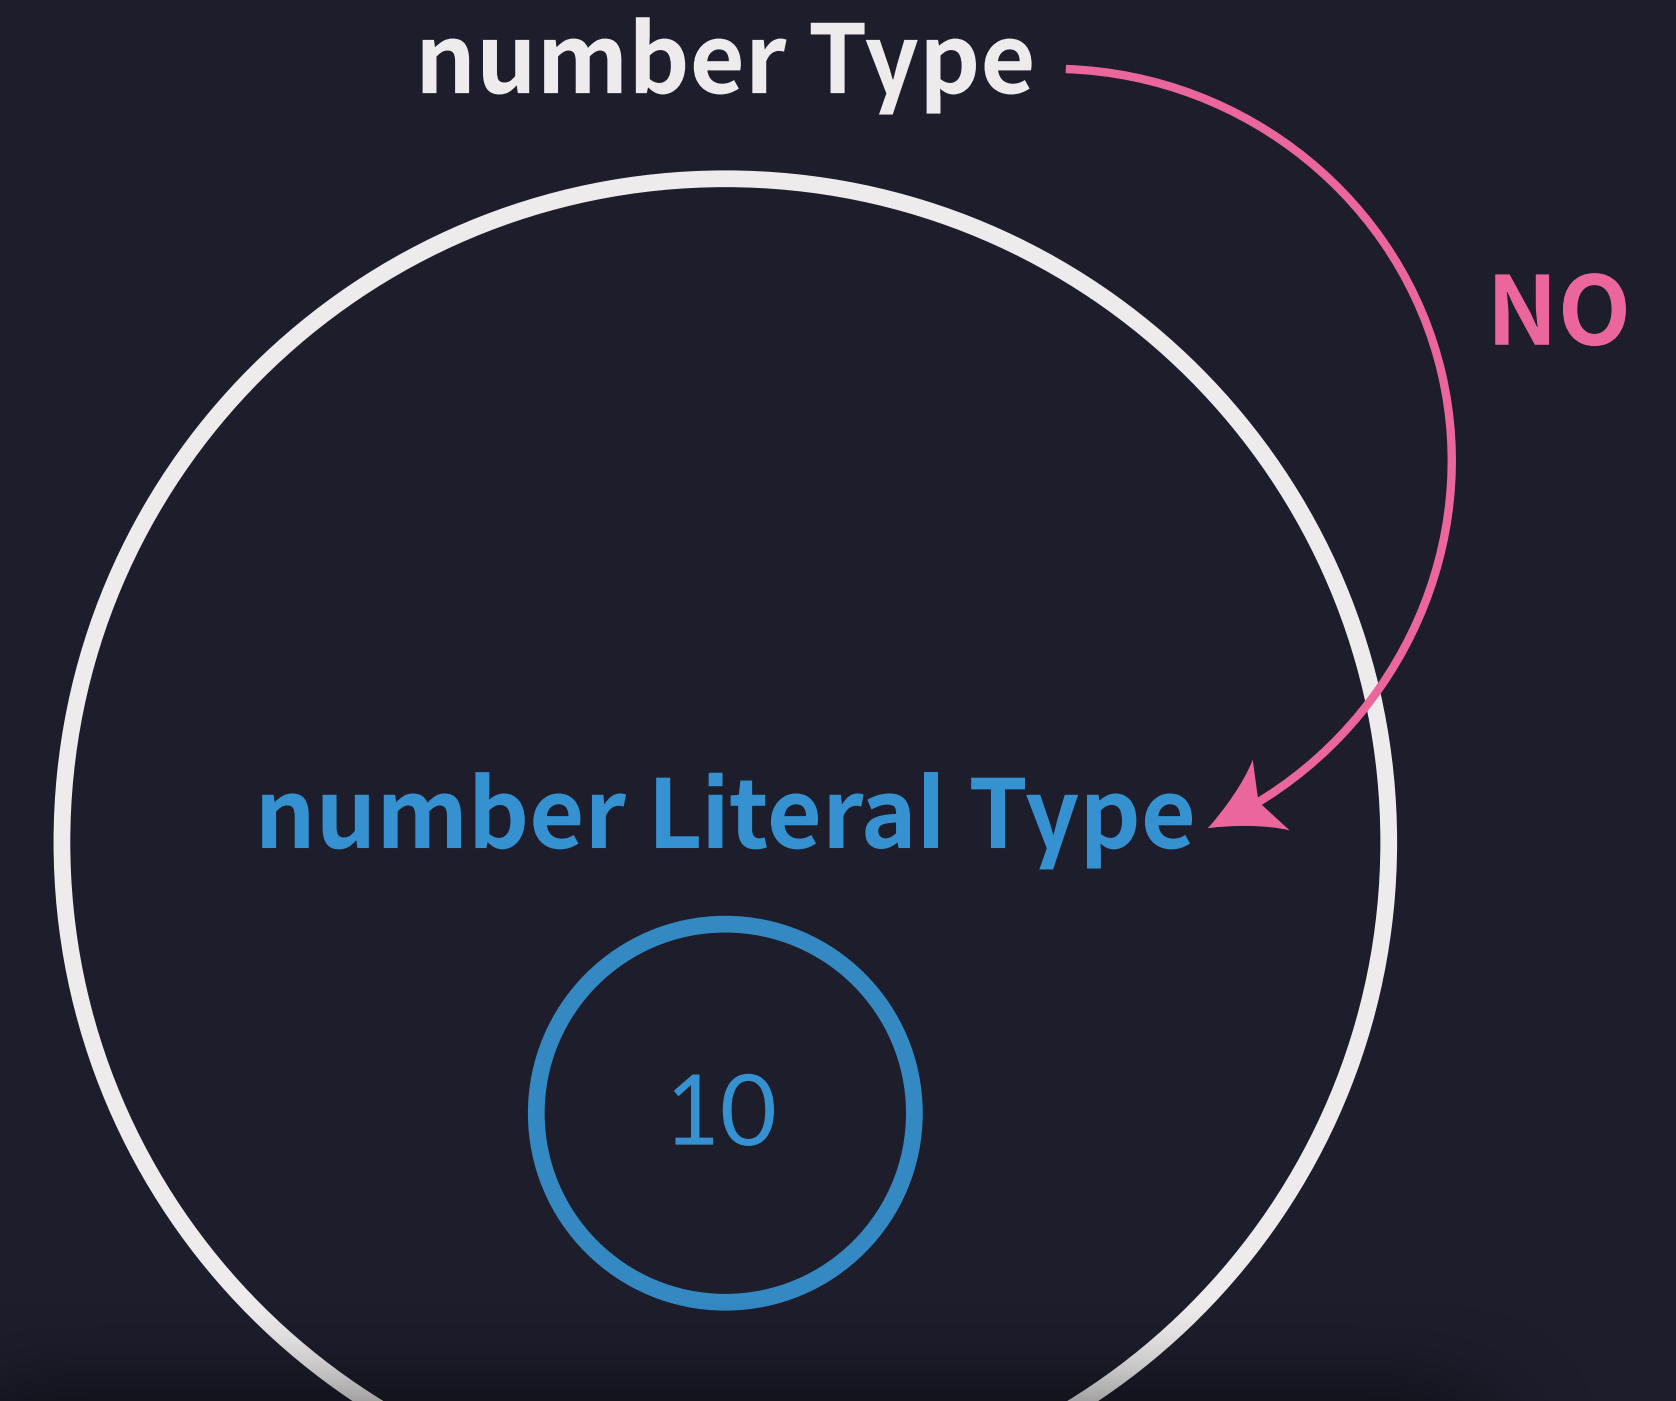

업 캐스팅

```
let num1: number = 10;  
let num2: 10 = 10;
```

```
num1 = num2;
```

다운 캐스팅

```
let num1: number = 10;  
let num2: 10 = 10;
```

```
num2 = num1; 'number'
```

슈퍼타입

대부분의 상황에 X
Down Cast

```
let num1: number = 10;  
let num2: 10 = 10;
```

```
num2 = num1;    'number'
```

서브타입

모든 상황에 가능
Up Cast

```
let num1: number = 10;  
let num2: 10 = 10;
```

```
num1 = num2;
```
